Many scientists now active in science education reform have discovered that this growing field has developed its own vocabulary—borrowed from both science and traditional education. Simple words and phrases, such as “assessment,” “cooperative learning,” and “inquiry,” have come to identify key concepts related to the ways in which science is taught and how that teaching is supported.

### **The Real Purpose of Assessments in Education - The Advocate**

Taken together, assessments and accountability policy constitute a third channel through which education reform ideas may flow. Various types of assessments— formative classroom assessment, classroom tests, state and local tests, college entrance and placement practices, tests for teacher certification—all interact with other elements in the education system, sometimes in unanticipated ways.
