Chapter 3: Ratio, Proportion & Percent  
RATIO A ratio is a comparison of the relative values of numbers or quantities. We can write a ratio for any statement containing such a comparison. For example, if oranges cost \$10/kg, apples \$8/kg and pineapples \$20/kg, the ratio of fruit prices is written as 10:8:20. Ratios can be written (or expressed) in any of the following ways:

## **Chapter 6: Ratio, Proportion, and Percent**

Change the following ratios to fractions and percentages. 1:3. In the previous problems, grams per milliliter is the unit of measure used for preparing solutions. Scales for measuring grams are rarely found in the clinical area or the home environment. Volume (in milliliters) is the common measurement of drugs for administration.

## **Chapter 6 Ratio and Proportion - Huntington Union Free ...**

So the ratio of flour to milk is 3 : 2. To make pancakes for a LOT of people we might need 4 times the quantity, so we multiply the numbers by 4:  $3 \times 4 : 2 \times 4 = 12 : 8$ . In other words, 12 cups of flour and 8 cups of milk. The ratio is still the same, so the pancakes should be just as yummy.
