Fruit Fly Genetics lab report. For exercise #4 we reviewed Mendel's law of genetics, punnet square, chi square, monohybrid cross and Mendel's dihybrid cross. For lab two the purpose of the lab was to observe the basic techniques of culturing flies and set up a crosses between different fruit flies and to provide proper nomenclature.

Drosophila Melanogaster, the fruit fly, is a great organism for genetic use because it has simple food requirements, occupies little space, is hardy, completes its life cycle in 12 days, makes a large number of offspring, can be knocked out easily, and it has many types of hereditary variations that can be seen with low power microscopes.

Assignment A: MONOHYBRID CROSS. 2. Cross your flies (P generation) and determine the phenotype of the F1 generation. 3. Now mate the offspring (F1) from that cross together (creates F2 generation). Return to the lab and choose "use fly in new mating" under the microscope view. 4. Sort your F2 flies and analyze results.

BS/LBS 158H. Fruit Fly Biology & Culture: Fruit flies are fairly easy to culture in the laboratory; only a few specialized materials and some basic skills are required to use them successfully in genetics studies. Here is a short guide to the biology and culture of Drosophila melanogaster.

### EXERCISE 6 Mendelian Genetics: Lessons from the Fruit Fly

VCISE is a collection of interactive, online simulations designed to enhance traditional middle and high school science curricula by providing supplements to experimental laboratory or field work. The inquiry-based activities emphasize the scientific method.

### Drosophila Virtual Lab - The Biology Corner

In this laboratory you will study the patterns by which physical characteristics are transmitted from generation to generation. By breeding fruit flies (Drosophila melanogaster) of unknown genetic composition and studying the traits and ratios seen in their offspring, you will determine whether a trait follows a monohybrid or dihybrid pattern of inheritance and whether it is sex-linked or autosomal.

The first virtual fruit fly lab road-tested was the Virtual Genetics Lab II version 3.2.0 (VGLII3.2.0) produced by a team at the University of Massachusetts, Boston. The program has pre-set "problems" which are individual crosses of parental fruit flies.

### Classical Genetics Simulator

Drosophila is an interactive simulation activity that enhances the traditional fruit fly laboratory experience. The experience takes place in a virtual environment where students have an unlimited ability to design experiments and analyze patterns of genetic inheritance to discover the principles of genetics.
