Strength Prediction of High-Strength Concrete by Fuzzy ...

Neural networks and fuzzy systems are currently used in civil engineering. Ricardo Bendaña presented a fuzzy-logic-based system for selecting contractors. As part of the validation process, a neural network was developed to prove that the fuzzy-control tool has a behavior that can be recognized by a neural network.

Fuzzy logic refers to a large subject dealing with a set of methods to characterize and quantify uncertainty in engineering systems that arise from ambiguity, imprecision, fuzziness, and lack of knowledge. Fuzzy logic is a reasoning system based on a foundation of fuzzy set theory, itself an extension of classical set theory, where set membership can be partial as opposed to all or none, as in ...

i did a project on perception of pedestrians where i had to work out on variance. i had to go through a lot of hardships with that topic, because 4 years of engineering and i never heard about that, so i left that topic and worked on variance and ...

Fuzzy Logic with Engineering Applications - Timothy J ...

In a fuzzy logic (FL) algorithm, three input variables (SF content, binder content, and age) and the output variable (compressive strength) were fuzzified using triangular membership functions. A total of 24 fuzzy rules were inferred from 60% of the data. Moreover, the FL model was tested against an artificial neural networks (ANNs) model.

Fundamentals of fuzzy sets and fuzzy logic

Its utility for synthesis of control systems is discussed in the context of an application to mobile robot motion control. In mobile robotics, a fuzzy logic based control system has the advantage that it allows the intuitive nature of collision-free navigation to be easily modeled using linguistic terminology.

What is Fuzzy logic Controller and Its Applications ...

The first industrial application of fuzzy logic was in the area of fuzzy controllers. It was done by two Danish civil engineers, L.P. Holmblad and J.J. Østergaard, who around 1980 at the company F.L. Schmidt developed a fuzzy controller for cement kilns.

The fuzzy logic if-then rule is built to control the activation of activities. The duration of the activity that varies with the quantities of resources involved is determined through the fuzzy logic rule-based model. The fuzzy logic control of activities is incorporated with the activity scanning simulation strategy to implement the fuzzy simulation system for construction operations. In addition, the fuzzy activity element is adopted in the graphical modeling process.
