Java Remote Method Invocation (RMI) allows you to write distributed objects using Java. This paper describes the benefits of RMI, and how you can connect it to existing and legacy systems as well as to components written in Java. RMI provides a simple and direct model for distributed computation with Java objects.

java - How to Handle Singleton Classes in Distributed ...

These are the most-used services any distributed system requires, and, by moving the implementation of these services from the software components to the component container, the complexity of the components is dramatically reduced. ...

What I came up with is that the system should work as following: The client sends out a file, or a set of files that contains code to be processed. That code will implement a distributed algorithm interface written by me, a specific class. The server will create an object from the class. That object will be responsible for the algorithm to be run.

Implementing Distributed Systems With Java

Implementing Distributed Systems with Java and CORBA [Markus Aleksy, Axel Korthaus, Martin Schader] on Amazon.com. *FREE* shipping on qualifying offers. This book provides graduate students and practitioners with knowledge of the CORBA standard and practical experience of implementing distributed systems with CORBA's Java mapping.

...

In this module, we will learn about client-server programming, and how distributed Java applications can communicate with each other using sockets. Since communication via sockets occurs at the level of bytes, we will learn how to serialize objects into bytes in the sender process and to deserialize bytes into objects in the receiver process.

Common Object Request Broker Architecture - Wikipedia

The Java Enterprise System implementation of distributed infrastructure services shown in Figure 2-5 consists of discrete software servers (system servers) that provide services at various levels within the distributed infrastructure service stack. These service providers are multi-threaded server process capable of supporting a large number of clients.
