Ion Activity, Ion Association and Solubility

Ion association is an important factor in phase-transfer catalysis, since a species such as R 4 P + Cl - is formally neutral and so can dissolve easily in a non-polar solvent of low dielectric constant. In this case it also helps that the surface of the cation is hydrophobic.

Ion association - Wikipedia

Ion association by Davies, C.W. and a great selection of related books, art and collectibles available now at AbeBooks.com.

Ion Association by Davies C W - AbeBooks

Ion association in the system Ca(OH)2–H3PO4–KCl–H2O at 37°C has been studied potentiometrically over a range of pH from 3 to 9.

Ion association in calcium phosphate solutions at 37°C ...

The Davies equation is an empirical extension of Debye–Hückel theory which can be used to calculate activity coefficients of electrolyte solutions at relatively high concentrations at 25 °C. The equation, originally published in 1938, was refined by fitting to experimental data.

Davies equation - Wikipedia

Complexes of the cupric ion with mono-, di-, and tri-ethanolamine . C. W. Davies and B. N. Patel Abstract. The complexes of mono-, di-, and tri-ethanolamine with copper have been studied by potentiometric, conductimetric, and spectrophotometric methods. Copper-ligand ratios of 1 : 1 and 1 : 2 have been found for the first two, but only 1 : 1 for triethanolamine except perhaps at high ...

Complexes of the cupric ion with mono-, di-, and tri ...

6.1.C Ion Complexing or specific interaction In some cases there are specific interactions between ions - solutes come close enough that they make direct contact and are considered a new species! These new species are called ion pairs (when ions are separated by H2O molecules but share their first hydration shell) or complexes (when ions are in contact and share electrons). Example: Ca2 ...
