Object Oriented Programming in C++ - GeeksforGeeks

C programmers have been using something like object oriented programming for years. They called it good modularity. The classic example of "object-oriented C" is the standard FILE structure and its family of functions fopen, fclose, fread, fwrite, fprintf, etc. Only the "methods" of the file object, fopen etc., access the members of FILE.

Class: A class in C++ is the building block, that leads to Object-Oriented programming. It is a user-defined data type, which holds its own data members and member functions, which can be accessed and used by creating an instance of that class. A C++ class is like a blueprint for an object. A class ...

Object Oriented programming Concepts in C++ | Studytonight

Object-Oriented Programming Languages. Object-oriented programming (OOP) languages are designed to overcome these problems. The basic unit of OOP is a class, which encapsulates both the static attributes and dynamic behaviors within a "box", and specifies the public interface for using these boxes. Since the class is well-encapsulated (compared with the function), it is easier to reuse these ...

The prime purpose of C++ programming was to add object orientation to the C programming language, which is in itself one of the most powerful programming languages. The core of the pure object-oriented programming is to create an object, in code, that has certain properties and methods.

OOP in C

Can we treat ANSI-C as an OO Language? So, we basically want to be able to create Abstract Data Types: They will be able to conceal their implementation details from the user, which will aid the user in dividing and conquering their code to make it more modular How can we implement this? With structs and void * pointers Basic Set implementation example from Axel-Tobias
