Testa, Christopher / Unit 1 - Kinematics

Kinematics is the science of describing the motion of objects. Such descriptions can rely upon words, diagrams, graphics, numerical data, and mathematical equations. This chapter of The Physics Classroom Tutorial explores each of these representations of motion using informative graphics, a systematic approach, and an easy-to-understand language.

Motion with variable acceleration is quite complicated. Only in some special cases can we easily solve such problems, but usually we need to solve second order differential equations to get the answer in these problems. All of the equations of motion in kinematics problems are expressed in terms of vectors or coordinates of vectors.

Answer: See answers and explanations below. This problem can be approached by either the use of a velocity-time graph or the use of kinematic equations (or a combination of each). Whatever the approach, it is imperative to break the multistage motion up into its three different acceleration periods.
